The Scientist Is In

Friday June 6, 2014, 12pm-2pm

Dr. Bill Schindler is an associate professor of archaeology and anthropology at Washington College. As a prehistoric and experimental archaeologist his research focuses on hands-on applications of prehistoric technologies including stone tools; ceramics; and food procurement, processing, storage, and use. As an avid hunter, forager and chef he incorporates wild, fermented, and cured foods into his family's diet on a regular basis. He relies upon the knowledge and know-how gained through utilizing primitive technologies in his experimental archaeology research to interpret the archaeological record and gain a better understanding of prehistoric life.
